Profile

Game developer and Master's student in Game Studies at the University of Jyväskylä, with a Bachelor's degree in Business Information Technology (Game Production) from JAMK University of Applied Sciences.

Experienced in Unity and C# development, with a focus on gameplay systems, game mechanics, NPC and enemy AI, state machines, pathfinding, and interactive systems. Experienced in translating game design requirements into maintainable technical solutions and working across multidisciplinary game development teams.

Combining practical game development experience with an expanding research perspective on game systems, player experience, artificial intelligence, and interactive media.

Education

University of Jyväskylä (JYU). Finland

Master's Programme in Game Studies
08/2026 - Present

- Focus areas: game research, game design and analysis, player experience, game cultures, and interactive media
- Master's degree studies combining theoretical and research-oriented perspectives on games with prior technical game development experience

JAMK University of Applied Sciences, Finland

Bachelor of Business Administration – Business Information Technology (Game Production)
08/2023 – 06/2026

- Completed credits: 238 / 210 ECTS
- Weighted GPA: 4.71/ 5.00

Selected coursework:

Game Programming & Advanced Game Programming · Game Engines 1–3 (Unity & Unreal Engine 5) · AI in Games · Game Design · Game Concept Development · Mobile & Online Game Programming · Software Engineering · Python Programming · Usability & User-Centric Design · Professional Project & Practical Training

Bachelor's Thesis:
Gamified Therapy as Applied Game Design: A Conceptual Framework Linking Cognitive Functions and Game Mechanics — Grade 5/5
https://www.theseus.fi/handle/10024/920647

Monash College, Australia

Engineering Technology Diploma

Completed: 2016

Technical & Analytical Skills

Game & Interactive Systems

- Gameplay systems design and implementation
- Game mechanics design, iteration, and balancing
- Player–system interaction analysis
- Player experience (PX) and usability analysis
- Game design principles and system-driven design
- Fast prototyping for gameplay and mechanic validation

Programming & Algorithms

- C#, Python
- Object-Oriented Programming
- Data structures and search algorithms (e.g. A*)

Artificial Intelligence & Intelligent Systems

- Rule-based AI systems
- State machines and decision logic
- NPC and enemy behaviour modelling
- Pathfinding and heuristic search
- Applied AI in interactive and game-based systems

Platform & Technologies

- PC and mobile game development
- PS5 game development
- Virtual Reality (VR) and Augmented Reality (AR) development
- Cross-platform development considerations

Tools & Practices

- Unity Game Engine
- Unreal Engine
- Git version control
- Technical documentation and system design
- End-to-end game development pipeline awareness

Project & Team Collaboration

- Agile-oriented project workflows
- Project management tools: Jira, Trello, Slack
- Cross-disciplinary collaboration between design, art, and development teams

Selected Game Projects

Remains – Gameplay Systems & Technical Architecture

Role: Lead Technical Developer, main programmer
Engine: Unity (C#)

- Contributed to the end-to-end production of a gameplay-focused project in collaboration with designers, artists, and programmers.
- Acted as a bridge between game design intentions and technical implementation through structured documentation and system breakdowns.
- Supported feature planning, feasibility analysis, and prioritization to ensure gameplay systems aligned with production goals and player experience.

Developed a holistic understanding of balancing scope, technical constraints, and gameplay quality within a team-based production environment.

Professional Experience

Unity Developer Assistant (Internship

Attigas Studio, Canada

07/2024 – 06/2025

- Supported gameplay prototyping and feature development using Unity and C#.
- Assisted in aligning design requirements with technical feasibility and implementation planning.
- Gained experience working in an international game development environment with remote collaboration.

Manager

Ocean Blue Day Spa, Melbourne, Australia

01/2017-06/2023

- Managed daily operations, staff coordination, and process optimization in a customer-facing environment.
- Led process optimization initiatives to improve operational efficiency and service quality.
- Developed strong communication, coordination, and responsibility ownership skills applicable to production and business-oriented roles.

Languages

Chinese (Mandarin): Native language

English: C2

Finnish: A2
